Hello Blanca and Paolo,

1) I just copied the updated BPM positions you gave me some time back. Is the position (3.082 m from the MQYY) of the BPMQA.4R5.B1 correct or I guess you are working on it with Adriana?

2) To save in crab cavity voltage we also moved D2 closer to the IP and moved the BPMs, correctors, collimators and crab cavity rigidly with the D2. The position I now have for the D2 is 142.5138 m from the IP.

3) Also Q4 we placed closer to the IP, explicitly at 177.6 m from the IP. This position might eventually still change.

4) Q5 and the following elements are on the same position.

I don't know if it is useful for you to change the positions of D2 and Q4 in your files. From my side it is not needed, I just wanted to inform you about the differences.

Cheers,
Miriam
